SERIES SWITCHING*

This is a totally safe way to connect an extra pair of speakers. Assuming both pairs of speakers are 8 Ohm, the minimum load presented to the amplifier is the normal 8 Ohms load. When both pairs are on together, the load INCREASES to a totally safe 16 Ohms.

CONNECT 2 PAIRS OF SPEAKERS TO YOUR —HI-FI SYSTEM—

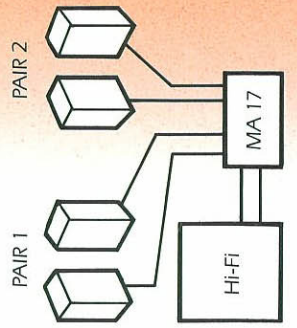
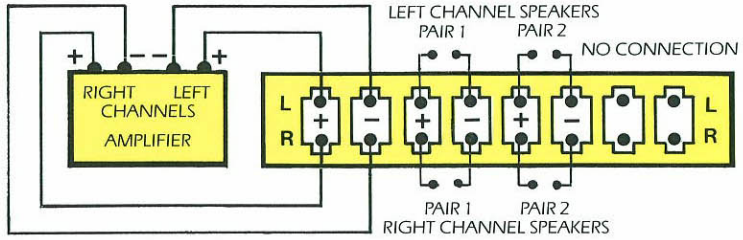
INDEPENDENT EARTH WIRING

QED



TYPE NO. MA 17 QED MADE IN ENGLAND



CONNECTION

To connect the MA 17, it is necessary to make a connection to the amplifier's speaker output terminals (if the amplifier has two sets of terminals, only one set should be used) and connect the speakers as shown above:—

OPERATION

Each pair of speakers may be selected individually by selecting either Pair 1 or Pair 2 position on the rocker switch. The centre switch position allows both pairs of speakers to operate simultaneously.
