

The Headphone Volume Control is suitable for adding headphone facilities to better quality amplifiers with a lower level of insertion loss than is normally associated with this type of unit. Provision is made for controlling the headphone volume by means of a separate control knob. The speakers are automatically switched off when headphones are inserted.

CONNECTION

To connect the MA 18, it is first necessary to disconnect the speakers from the Hi Fi Systems and route them through the MA 18 as shown.

OPERATION

By inserting the headphone jack, the speakers are automatically disconnected. All that remains is to adjust the headphone volume via the control knob.
