ENGLAND

CONNECTION

To connect the MA 19, it is necessary to make a connection to the amplifier's speaker output terminals (if the amplifier has two sets of terminals, only one set should be used). It is also necessary to connect the MA 19 directly to the speaker outputs of the T.V. — these may either be dual mono or stereo outputs. Finally, connect the speakers to the MA 19 as shown above:—

OPERATION

It is necessary with this product to switch the left and right channels separately. Apart from this, the changeover from one source to the other is straightforward and completely safe.
