

More and more products are available to connect to your Hi-Fi system - if only there were enough inputs. The MA32 overcomes this limitation by providing for up to three additional inputs. A set of push button customisation labels are provided for correctly identifying each input.

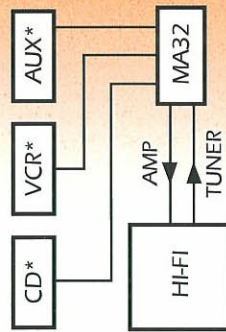

**CONNECT THREE EXTRA
LINE LEVEL INPUTS TO

TO AMPLIFIER
'TUNER' INPUT

CONNECTION

To connect the MA32, it is first necessary to disconnect the TUNER from the AMPLIFIER (or an alternative line level input in the case of a Receiver) and route it through the MA32 as shown. An additional cable will be required to connect the MA32 back to the AMPLIFIER. Each of the new source inputs is connected directly to the MA32.

OPERATION

The button on the far right hand side is the BYPASS button (TUNER) with the following three buttons, inputs one, two and three. Once these have been correctly identified with the labels supplied, all that remains is to press a button to select the appropriate input.
