INDEPENDENT EARTH WIRING

QED

Compact Disc Passive Pre-Amp

TYPE NO.

MA34

QED

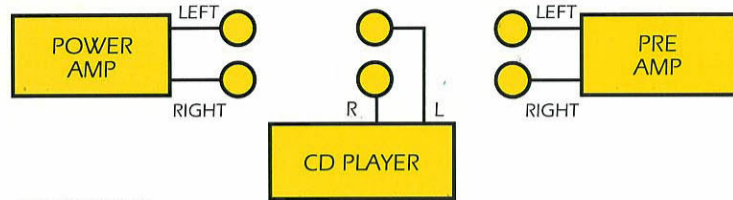

MADE IN
ENGLAND

WITH PRE-AMPLIFIER

It has often been said that all a C.D. player requires to work at its best is a power amplifier with a volume control.

Unfortunately, power amplifiers are not so equipped, therefore some kind of add-on unit or passive pre-amplifier is required.

The QED MA34 is a no-compromise Passive Pre-Amp offering the ultimate in signal path optimisation. It features a very high quality close tolerance ALPS "blue box" potentiometer. A self cleaning switch which switches between C.D. DIRECT and a conventional pre-amp if required.

CONNECTION

To connect the MA34, it is first necessary to disconnect the PRE-AMPLIFIER from the POWER AMPLIFIER and route it through the MA34 as shown. The CD Player now connects directly to the MA34.

When used with integrated amplifiers, the MA34 connects to the tape input sockets as shown. Adding a DIRECT CD input to an integrated amplifier avoids any additional signal degrading circuitry that may be present in the pre-amplifier section.

OPERATION

Select CD DIRECT by pressing the front panel push button switch. Release button to revert to the original pre-amplifier. The close tolerance volume control controls the volume of whatever input is selected.
